

Minutes Word Cafe 1

Takeaways from other groups

- Focus on scope, this is still too vague what the specific issue is on which we will focus
- Take a look at heating, this might have potential

Notes based on the presentation of group 2 (same case)

- They want to create spatial clusters throughout the Netherlands, based on supply and demand
- Product idea 1 is a tool.
- Another idea (idea 2) has no tool; it goes straight into working with clusters.
- Emiel mentioned making the differences between each cluster explicit.
- They have technical experts at RVB, and environmental/area managers who understand local interests well.
 - Emiel thinks clustering is a very good approach.
 - Provide reasoning: why is this an opportunity?
 - Look at the rules to understand why certain strategies (to solve netcongestion for the benefit of RVB) work for each cluster.
- Why are the clusters different compared to each other?
 - Look into this!
 - Emiel wants general rules and guidelines per region.
- Compare heat vs. electricity for the clusters, and explain why each region is different — what makes these regions distinct?
- RVB cannot build because grid reinforcement is not moving forward, especially on Defence sites.
